## OTS online: Mail Control 1.0

### Features of OTS online

#### Exact Functions

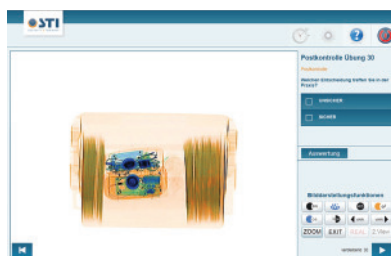

Image enhancement functions are displayed exactly as on the machine (including VARI in all views).

#### Reporting

As an administrator / or responsible person you will receive a monthly list of training times of the participants for checking and for submission to the competent authority.

#### Administration

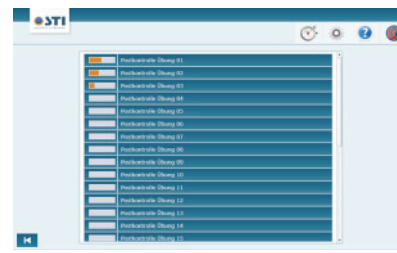

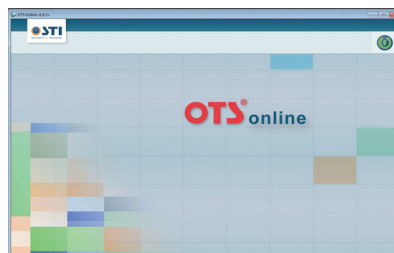

Furthermore the administrator will be able to set up users, to create login accounts for his operators and to send the account data via email to the participants.

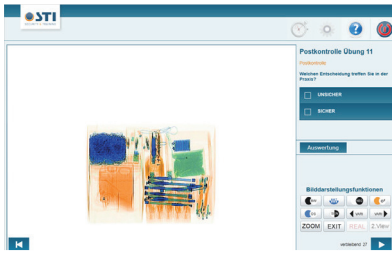

OTS Software – the successful X-ray image analysis software, well-known throughout the world – has gone online. From now on, many of the software’s features are also available on the Internet.

OTS online – Mail Screening 1.0 was specifically developed to provide further training for mail security screeners and serves to maintain and improve the detection skills of the staff involved. Thus, mail security screeners are able to complete the lessons in the field of X-ray image interpretation whenever and wherever it is convenient.

The OTS online module “Mail Control 1.0” is made up of 30 learning units with 30 images that identify explosives and dangerous objects and meets the specific requirements for the inspection of mail items.

When checking postal items, screeners have to familiarise themselves with the particular characteristics of X-ray images. Objects of different sizes must be evaluated correctly and the proportions must be understood and evaluated accordingly.

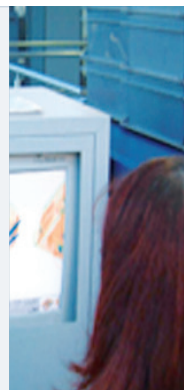

Therefore, screening techniques can only be trained correctly in this area by using a wide selection of different mail relevant X-ray images.

OTS online - Mail Control 1.0 especially deals with the detection and handling of a variety of unconventional explosive and incendiary devices (IEDs) and various dangerous objects.

Content Mail Control 1.0	
Learning objects	1000
Threats	270
Learning units	30
Tests	4

### Who will benefit from this course?

- ▶ Security screeners at mail checkpoints
- ▶ Instructors interested in monitoring the individual learning process of each student or group
- ▶ Clients interested to provide their security staff with a tool for continuous security training
- ▶ Clients interested to combine the theoretical part of an instructor-led training seminar with practical training with an X-ray simulator

If you are interested in this, or any of our other modules, please contact us and speak to a local sales agent.
